

Marcin Rolbiecki

+48 512 540 840 | Warsaw, Poland | rolbieckidev@gmail.com | github.com/mrolbiecki

EXPERIENCE

- Software Engineer Intern

Jun 2026 — present

Google

Warsaw

 - Building reusable evaluation infrastructure for AI agents in **Python** using the Google Agent Development Kit (ADK), including custom environments and datasets.
 - Designing a comparative experiment to evaluate two agents pursuing the same objective, but implemented with different frameworks; documenting behavioral and engineering tradeoffs.
- Software Engineer Intern

Jun 2025 — Sep 2025

Snowflake

Warsaw

 - Joined the open-source [Universal Driver](#) as its second contributor, helping shape its early **Rust** architecture and error-handling design, including adoption of SNAFU.
 - Owned the end-to-end implementation of PUT/GET file transfers in the Rust core, covering AWS SDK integration, encryption, and compression; built compatibility tests across Rust, Python, and ODBC.
- Software Developer

Jun 2024 — Jun 2025

Atinea

Warsaw

 - Developed a custom SQL query parser and preprocessor.
 - Applied graph algorithms to reduce time complexity, accelerating worst-case workloads from 1h to 1s in stress tests.
- Problem Setter

Jun 2022 — Jun 2025

Instalogik

Warsaw

 - Designed problems for three editions of one of Poland's largest programming competitions, contributing to 3x participation growth (6,400 to 18,100).

PROJECTS

- Raft**: implemented the Raft consensus algorithm in **Rust** for a distributed systems course, including leader election, replicated logs, persistence, snapshots, cluster-membership changes, and client sessions; verified it against the course test suite.
- Formalizer**: designed and implemented an experimental AI-agent pipeline for turning mathematical source material into **Lean 4** projects that compile, with isolated Git worktrees, automated validation, replayable LLM tests, and OpenTelemetry tracing.
- Distributed Shortest Paths**: designed and implemented the **Python** serving layer and scalable preprocessing for large OpenStreetMap road graphs, sharding input and processing batches with GCS and Dataflow.

EDUCATION

- University of Warsaw - Faculty of Mathematics, Informatics and Mechanics

Warsaw

BSc in Computer Science

Oct 2023 — Jul 2026

 - Final grade: **4.61/5.00**; advanced coursework in algorithms, distributed systems, and automata theory.
 - Thesis: *FormalInception-ATP*, an agentic Lean 4 theorem-proving harness that achieved a **100% success rate** on the miniF2F benchmark using inexpensive models.

SKILLS

- Programming Languages**: Rust, Python, C++, Java, C, SQL, Bash, Lean
- Systems and Tools**: Linux, Git, GCP, Kubernetes, databases, AI coding tools (Codex, Claude Code, Cursor)

ACHIEVEMENTS AND LEADERSHIP

- Finalist of the Polish Olympiad in Informatics

Feb 2023

 - Ranked in the top 100 of over 1,000 participants; solved 500+ complex problems in contests and training.
- Assistant Unit Leader - Bytów

Mar 2021 — Jun 2025

 - Co-organized large-scale events, including three summer camps for 100+ participants; led and coordinated groups of 20+ members.
